;    33          0033  1 ! ABSTRACT:
;    34          0034  1 !
;    35          0035  1 !       This module implements the RTL Timing Facility, replacing
;    36          0036  1 !       subroutines TIMRB and TIMRE.  It consists of four routines:
;    37          0037  1 !       LIB$INIT_TIMER, LIB$SHOW_TIMER, LIB$STAT_TIMER and LIB$FREE_TIMER.
;    38          0038  1 !
;    39          0039  1 ! ENVIRONMENT: User mode, can be made AST reentrant.
;    40          0040  1 !
;    41          0041  1 ! AUTHOR: Steven B. Lionel, CREATION DATE: 01-Dec-1978
;    42          0042  1 !
;    43          0043  1 ! MODIFIED BY:
;    44          0044  1 !
;    45          0045  1 ! SBL, 01-Dec-1978 : VERSION 01
;    46          0046  1 ! 1-001 - Original.  SBL 01-Dec-1978
;    47          0047  1 ! 1-002 - Fix error in calculating CPU_HOURS.  SBL 02-Jan-1979
;    48          0048  1 ! 1-003 - Correct some typos in comments and rearrange the module
;    49          0049  1 !         header to conform to the other RTL modules.  JBS 30-JUL-1979
;    50          0050  1 ! 1-004 - Fix some more comments.  SBL 6-August-1979
;    51          0051  1 ! 1-005 - FAO_STRING_0 was missing a descriptor!  SBL 29-Oct-1979
;    52          0052  1 ! 1-006 - Changed the JPIPARAMS to be read only by putting them in
;    53          0053  1 !         the _LIB$CODE psect.  Also added EDIT field and updated
;    54          0054  1 !         the copyright date.  LB 27-Aug-1981
;    55          0055  1 ! 1-007 - Make text for SHOW_TIMER of all values shorter, so that it won't
;    56          0056  1 !         tend to overflow an 80-column screen.  Remove the access test
;    57          0057  1 !         on the handle block so that users who set watchpoints won't get
```

```
;    58          0058  1 !           unnecessarily upset.  SBL 2-Nov-1981
;    59          0059  1 ! 1-008 - Use LIB$GET_EF to get an event flag number for the call to
;    60          0060  1 !           $GETJPI.  SBL 30-Nov-1981
;    61          0061  1 ! 1-009 - Use $GETJPIW to ensure synchronous operation. DG 26-Oct-1983
;    62          0062  1 ! 1-010 - Conditionalize setting of LSTORAGE[0] to eliminate non-zero
;    63          0063  1 !           read-only data in a copy-on-ref page, a performance imporvement.

;  154     0246  1 GLOBAL ROUTINE LIB$INIT_TIMER (
;  155     0247  1         HANDLE
;  156     0248  1     ) =
;  157     0249  1
;  158     0250  1 !++
;  159     0251  1 ! FUNCTIONAL DESCRIPTION:
;  160     0252  1 !
;  161     0253  1 !       This routine gets from the operating system the current
;  162     0254  1 !       values of specified times and counts, and stores them
;  163     0255  1 !       for future use by other RTL timer routines.  Depending
;  164     0256  1 !       on the optional argument, "handle", the values are stored
;  165     0257  1 !       in one of three places.  See FORMAL PARAMETERS for more
;  166     0258  1 !       details.
;  167     0259  1 !
;  168     0260  1 ! CALLING SEQUENCE:
;  169     0261  1 !
;  170     0262  1 !       status.wlc.v = LIB$INIT_TIMER ([handle.ml])
;  171     0263  1 !
;  172     0264  1 ! FORMAL PARAMETERS:
;  173     0265  1 !
;  174     0266  1 !       handle  - Optional.  Determines where the values
;  175     0267  1 !                 of times and counts will be stored.
;  176     0268  1 !
;  177     0269  1 !                 If missing, they will be stored in OWN
;  178     0270  1 !                 storage.  This call is not
;  179     0271  1 !                 reentrant.
;  180     0272  1 !
;  181     0273  1 !                 If zero, a block of dynamic heap storage
;  182     0274  1 !                 will be allocated by a call to LIB$GET_VM,
;  183     0275  1 !                 the values placed in that block and the
;  184     0276  1 !                 address of the block returned in "handle".
;  185     0277  1 !                 This method is AST reentrant.
;  186     0278  1 !
;  187     0279  1 !                 If non zero, it is considered to be the
;  188     0280  1 !                 address of a storage block previously
;  189     0281  1 !                 allocated by a call to LIB$INIT_TIMER.  If
;  190     0282  1 !                 so, the block is reused, and fresh times
;  191     0283  1 !                 and counts are stored in it.
;  192     0284  1 !

;  289     0380  1 ! FUNCTIONAL DESCRIPTION:
;  290     0381  1 !
;  291     0382  1 !       LIB$SHOW_TIMER is used to obtain the accumulated times/counts
;  292     0383  1 !       since the last time LIB$INIT_TIMER was called.  In the default
;  293     0384  1 !       mode, with neither CODE nor ACTION specified in the call, the
;  294     0385  1 !       routine will output to SYS$OUTPUT a line giving the following
;  295     0386  1 !       five items of information:
;  296     0387  1 !               ELAPSED = hhhh:mm:ss.cc - Elapsed real time
;  297     0388  1 !               CPU = hhhh:mm:ss.cc     - Elapsed CPU time
;  298     0389  1 !               BUFIO = nnnn            - Count of buffered I/O operations
;  299     0390  1 !               DIRIO = nnnn            - Count of direct I/O operations
;  300     0391  1 !               PAGEFLTS = nnnn         - Count of pagefaults
;  301     0392  1 !
;  302     0393  1 !
;  303     0394  1 !       Optionally, only one of the five statistics can be output to
;  304     0395  1 !       SYS$OUTPUT and/or the line of information can be passed to a
;  305     0396  1 !       user-specified "action routine", for processing different from
;  306     0397  1 !       the default.
;  307     0398  1 !
;  308     0399  1 !
;  309     0400  1 ! CALLING SEQUENCE:
;  310     0401  1 !
;  311     0402  1 !       status.wlc.v = LIB$SHOW_TIMER ([[[[handle.rl.r], code.rl.r],
;  312     0403  1 !                                       action.flc.rp], userarg.rl.v])
;  313     0404  1 !
;  314     0405  1 !
;  315     0406  1 ! FORMAL PARAMETERS:
;  316     0407  1 !
;  317     0408  1 !       handle  - (Optional) If specified, must be the same value as
;  318     0409  1 !                 returned by a previous call to LIB$INIT_TIMER.
;  319     0410  1 !                 If omitted, the routine's OWN storage will be used.
;  320     0411  1 !                 If handle is omitted, and LIB$INIT_TIMER has not previously
;  321     0412  1 !                 been called, Elapsed time will show the actual time-of-day
;  322     0413  1 !                 and the remaining values will be those accumulated since process login.
;  323     0414  1 !
;  324     0415  1 !       code    - (Optional) Specifies the particular statistic desired.
;  325     0416  1 !                 If given, it must be one of the following values:
;  326     0417  1 !                       LIB$K_TMRELP = 1 = Elapsed time
;  327     0418  1 !                       LIB$K_TMRCPU = 2 = CPU time
;  328     0419  1 !                       LIB$K_TMRBUF = 3 = Buffered I/O
;  329     0420  1 !                       LIB$K_TMRDIR = 4 = Direct I/O
;  330     0421  1 !                       LIB$K_TMRFLT = 5 = Page faults
;  331     0422  1 !                 If omitted or zero, all five statistics will be returned
;  332     0423  1 !                 on one line.
;  333     0424  1 !
;  334     0425  1 !       action
;  335     0426  1 !       userarg - (Optional)  These two parameters allow the user to direct
;  336     0427  1 !                 the output of LIB$SHOW_TIMER somewhere other than SYS$OUTPUT.
;  337     0428  1 !                 If "action" is given, it is the address of a function
;  338     0429  1 !                 procedure to call.  The arguments to this function are
```

```
;  339     0430  1 !                 described below.  The function should return either
;  340     0431  1 !                 a success of failure condition value, which will be
;  341     0432  1 !                 returned as the value of LIB$SHOW_TIMER.
;  342     0433  1 !
;  343     0434  1 !       CALLING SEQUENCE OF ACTION ROUTINE:
;  344     0435  1 !
;  345     0436  1 !               status.wlc.v = (action) (out_string.rt.ds [, userarg.rl.v])
;  346     0437  1 !

```
;  552     0642  1 GLOBAL ROUTINE LIB$STAT_TIMER (
;  553     0643  1         CODE,
;  554     0644  1         VALUE,
;  555     0645  1         HANDLE
;  556     0646  1     ) =
;  557     0647  1
;  558     0648  1 !++
;  559     0649  1 ! FUNCTIONAL DESCRIPTION:
;  560     0650  1 !
;  561     0651  1 !       LIB$STAT_TIMER returns to its caller one of five available
;  562     0652  1 !       statistics.  Unlike LIB$SHOW_TIMER which formats the values
;  563     0653  1 !       for output, LIB$STAT_TIMER returns the value to a location
;  564     0654  1 !       specified as a parameter.
;  565     0655  1 !
;  566     0656  1 !       Only one of the five statistics can be returned by one call
;  567     0657  1 !       to LIB$STAT_TIMER.  "code" must be one of the five values
;  568     0658  1 !       described for LIB$SHOW_TIMER.  A "code" of zero is invalid.
;  569     0659  1 !
;  570     0660  1 !       It is important to note that elapsed time (LIB$K_TMRELP) is
;  571     0661  1 !       returned in the system quadword format.  Therefore the receiving
;  572     0662  1 !       area should be 8 bytes long.  All other values are longwords.
;  573     0663  1 !
;  574     0664  1 ! CALLING SEQUENCE:
;  575     0665  1 !
;  576     0666  1 !       status.wlc.v = LIB$STAT_TIMER (code.rl, value.wx [, handle.rl])
;  577     0667  1 !
;  578     0668  1 !
;  579     0669  1 ! FORMAL PARAMETERS:
;  580     0670  1 !
;  581     0671  1 !       code    - Specifies which statistic is to be returned.  Allowed
;  582     0672  1 !                 values are:
;  583     0673  1 !                       LIB$K_TMRELP = 1 = Elapsed time - system quadword format
;  584     0674  1 !                       LIB$K_TMRCPU = 2 = CPU time - .01 second units
;  585     0675  1 !                       LIB$K_TMRBUF = 3 = Buffered I/O
;  586     0676  1 !                       LIB$K_TMRDIR = 4 = Direct I/O
;  587     0677  1 !                       LIB$K_TMRFLT = 5 = Page faults
;  588     0678  1 !                 Note that it is invalid to omit "code": or to give
;  589     0679  1 !                 a "code" of zero.
;  590     0680  1 !
;  591     0681  1 !       value   - The location to store the result.  All values are
;  592     0682  1 !                 longword integers except elapsed time, which is a
;  593     0683  1 !                 quadword.  See VAX/VMS System Services Reference Manual
;  594     0684  1 !                 for more details on the system quadword time format.
;  595     0685  1 !
;  596     0686  1 !       handle  - (Optional)  If specified, it must be the value returned
;  597     0687  1 !                 by a previous call to LIB$INIT_TIMER.  Otherwise, OWN
;  598     0688  1 !                 storage will be used.

;  777     0865  1 ! FUNCTIONAL DESCRIPTION:
;  778     0866  1 !
;  779     0867  1 !       Calls the system services SYS$GETJPI and SYS$GETTIM and places the times
;  780     0868  1 !       and counts in the block pointed to by VALUES.  The particular
;  781     0869  1 !       times and counts obtained are determined by the codes placed
;  782     0870  1 !       in JPIPARAMS, a block of OWN storage.  This block is never
;  783     0871  1 !       altered; instead it is copied to the stack and changed there,
;  784     0872  1 !       thus this routine is reentrant.
;  785     0873  1 !
;  786     0874  1 ! FORMAL PARAMETERS:
;  787     0875  1 !
;  788     0876  1 !       VALUES.ml.ra    - Points to a block of N_OF_VALUES+1 longwords
;  789     0877  1 !                         into which are placed the times and counts.
;  790     0878  1 !                         The current time of day is placed in the
;  791     0879  1 !                         last two longwords of the block.
;  792     0880  1 !
