104     M 0486 1     This routine parses the file identifier field in HDR1, trailing blanks
105     M 0487 1     are stripped from type and name fields, translate to RAD50 and

234 0615 1 This routine returns the rad-50 code of the next character in the
235 0616 1 input string if it is in the rad-50 set. If end of string has been
236 0617 1 reached, it returns zero. If it is a non-rad50 char, then it is
