Author: Steven B. Lionel, 1-April-1981

1-001 - Original. SBL 1-April-1981
1-002 - Change SPASS\$RMS_OP so that it doesn't loop on RMSS_ACT unless the
file is on a disk device. SBL 29-July-1982
1-003 - Make that a disk or tape device. SBL 29-July-1982
!--

+ Macro to signal a Pascal bugcheck.
-

MACRO

```
SPASS$BUGCHECK (bugname) =  
BEGIN  
  PASS$BUGCHECK (bugname);  
 RETURN 0;  
END %;
```

+
Macro to signal an I/O error. The source code specifies the first
message as a PASS\$xxx symbol. This macro changes it to a PASS\$Kxxx
symbol to result in shorter code. If it is desired to change back,
only this macro need be modified.
-

MACRO

+
! Internal macro MOD_SIG_NAME takes as its argument a sequence

of characters which is the exploded PASS_xxx signal name and returns the equivalent name PASSK_xxx. It is only used by \$PASS\$IO_ERROR.

```
MOD_SIG_NAME (cP,cA,cS,c$,c_) =  
  %NAME ('PASSK_',%REMAINING) %,  
  
$PASS$IO_ERROR (signame) =  
  BEGIN  
    PASS$SIGNAL (PFV [PFV$R PFV], MOD SIG_NAME(%EXPLODE(signame))  
      %IF %NULL(%REMAINING)  
      %THEN  
      %ELSE  
        %REMAINING  
      %FI  
    );  
  
  RETURN 0;  
  END %;
```

+ Macro to do an RMS operation with retry for RMSS_ACT if a disk or tape device.

```
MACRO  
  $PASS$RMS_OP (rms_op) =  
  BEGIN  
    LOCAL  
      $$STATUS;  
    DO $$STATUS = (rms_op) UNTIL (.$$STATUS OR (.$$STATUS NEQ RMSS_ACT)  
      OR NOT .FCB [FCBV_FOD]);  
    .$$STATUS  
  END %;
```

+ Structure definitions used to declare the FAB and NAM as being offset from FCB. To use, make the following declarations:

```
BIND  
  FAB = FCB: REF $PASS$FAB_FCB_STRUCT,  
  NAM = FCB: REF $PASS$NAM_FCB_STRUCT;
```

```
STRUCTURE  
  $PASS$FAB_FCB_STRUCT [O, P, S, E] =  
    [FAB$C_B[N]  
     ($PASS$FAB_FCB_STRUCT+RAB$C_BLN+O)<P,S,E>,
```

```
  $PASS$NAM_FCB_STRUCT [O, P, S, E] =  
    [NAM$C_B[N]  
     ($PASS$NAM_FCB_STRUCT+RAB$C_BLN+FAB$C_BLN+O)<P,S,E>;
```
