

OperationModification

To modify all addresses
in a set of orders which
refer to another set of
~~words~~ ~~for~~ which are to be

MOD

Use

moved to another location
(A generalized Adaptation)

a) Calling Linkage

L	:	100	8	L+2	3ff	35f
						MOD:1
L + 1:		/	5	/	/	
L + 2:		/	0	s	L+3	β
L + 3		0	m	p	f	l

b) Adaptation Link Word

L + 2: 024 1WL 022 B

c) Storage

j = 36 words
k = 34 orders
26 constants
54 opstos: 350 to 35f

m-p orders to be modified
f-l present location of
words to be moved
s future location of
first word to be
moved.

Requirements and Performance

- a) Method of operation Floating - Address Modification
~~Address Modification~~
- b) Additional routines required None
- c) Range and form of variable Orders only
- d) Accuracy Exact
- e) Performance time ~ 630ms + 950ms/order
